Machine Rebuilds

BUILT TO BE REBUILT

Caterpillar® Certified Machine Rebuilds

The Cat® Certified Machine Rebuild program incorporates the very latest technology and critical engineering updates into your machine at a fraction of the cost of buying new. This process restores your machine's original productivity and reliability, and Cat product improvements and updated components are installed to increase performance.

As many as 350 tests and inspections, plus automatic replacement of up to 7,000 parts, ensure the same high level of quality you would expect from a new Cat machine.

Cat Certified Rebuilds involve the complete disassembly of the machine down to the frame, followed by rebuilding or replacement of:

- bearings
- ROPS
- operator's station
- radiator
- transmission
- engine
- electronic systems
- axles
- hydraulic systems
- brakes
- undercarriage
- final drives
- steering

Completely rebuilt from the frame up, individual components are tested prior to final machine testing to ensure that each Cat Certified Rebuild machine is in perfect operating condition.

The warranty on a Cat Certified Machine Rebuild is 3 years or 5,000 hours (whichever comes first) on the Power Train.

Yancey Custom Machine Rebuilds

A Yancey Custom Rebuild includes many of the same upgrades as a Cat Certified Rebuild, but provides you the flexibility of customizing the rebuild to meet your specific needs and budget.

This rebuild option allows you to tell us exactly what you would like to have rebuilt or repaired. You can include any combination of components or systems to be rebuilt, from the hydraulic system to the final drive to a complete undercarriage rebuild. The choice is yours.

The warranty on a Yancey Machine Rebuild is 3 years or 5,000 hours (whichever comes first) on the Power Train. This is higher than the standard six month Power Train warranty on a new Caterpillar machine.

Caterpillar Certified Power Train Rebuilds

Cat Certified Power Train Rebuilds are the third rebuild option offered by Yancey Bros. Co. This rebuild process starts with a complete Power Train inspection. The Power Train is completely disassembled and rebuilt. All critical engineering updates and improvements are included in the replacement or recondition of approximately 3,000 parts.

Almost 200 test and inspections ensure the same high level of quality you expect from a new Caterpillar Power Train.

The warranty on a Cat Certified Power Train Rebuild is 3 years or 5,000 hours (whichever comes first).

The Cat Certified Power Train Rebuild program covers:

- engine
- transmission
- radiator
- brakes
- torque converter
- transfer gear box
- universal joints
- sensors
- drive shafts
- differentials
- final drives
- sending units
- software
- engine wiring harness
- power train electrical switches
- power train electronic control modules

CAT® CERTIFIED AND YANCEY CUSTOM REBUILDS TAKE THE MACHINES DOWN TO THE FRAME AND THEN REBUILD THEM TO LIKE-NEW CONDITION
